The 50th Annual Report for
the DeKalb County
Health Department

Serving the “County’s most valuable resource — its people.”
Mission Statement

The mission of the DeKalb County Health Department is to promote optimal health for all county residents. Health promotion includes preventative health services, health protection services and health education. Working in partnership with other organizations, programs help individuals, families, and the community prevent, as well as manage, health problems and risks. DeKalb County Health Department has a strong commitment to delivering quality public health services with competence and skill, while respecting the dignity and rights of all individuals.

A MESSAGE FROM THE ADMINISTRATOR

We are very pleased to present our Fiftieth Annual Report which highlights the ways in which DeKalb County Health Department contributes to better health and improved health outcomes in our community.

The last year came with both challenges and opportunities for the Health Department. The impasse of the state budget continued to impact the availability and stability of public health grant funding. Responding to communicable disease activity challenged our resources, as staff conducted over eight hundred and fifty (850) case investigations of reportable disease and managed four (4) local outbreak investigations to prevent further spread of disease in our community.

We had the opportunity this past year to enhance our community partnerships to address gaps in the community. We established a partnership with the DeKalb County Family Service Agencies Children’s Advocacy Center to provide clinical space in order to provide exams for children who have been victims to suspected sexual or physical abuse. We also collaborated with Dr. Jason Grinter and Onsite Dental to offer follow-up dental exams for screenings conducted in our local schools. In addition, we worked closely with the Kishwaukee College Nursing Program and the NIU School of Nursing to build a volunteer corps of nurses to help us respond in the event of a public health emergency.

During this time of fiscal uncertainty, we continue to look at ways to sustain our current set of services. Over the past few years, our Health Department has made great strides containing costs and increasing revenue through improving efficiencies in our medical billing. This has been critical in a time when grant revenue to support our work has been very unstable due to several external factors.

We would like to thank our Health Department staff, elected and appointed officials, community partners, and the residents of DeKalb County for their ongoing support and commitment to public health.

For the last fifty years, it has been the mission of the Health Department to prevent disease, protect the population, and promote the health in DeKalb County, and we are honored to continue providing vital services that meet the ever-evolving needs of our community.

Sincerely,

Lisa Gonzalez, MPH
Administrator

**Programs**

**ANIMAL CONTROL**

The mission of Animal Control is to prevent and control rabies in DeKalb County. Part of that entails investigating animal bites, and capturing and removing bats from homes of residents. Animal Control wardens investigated 158 animal bites and removed 52 bats in 2016. One bat tested positive for rabies. In conjunction with our Communicable Disease Program, residents were instructed whether rabies prophylaxis was required.

In consultation with the State Attorney’s Office, Animal Control updated the local ordinance to include the definition of a nuisance dog. This will allow wardens to cite an owner if their dog is running at large and creating a nuisance such as causing an automobile accident.

Staff also dealt with an outbreak of suspected distemper in raccoons in the City of DeKalb. There were 65 raccoons captured and removed from the community due to this illness. During the summer months, we also trap mosquitoes throughout the county and test them for West Nile virus. This surveillance helps us determine if residents of DeKalb County could be at risk for infection.

**VITAL RECORDS**

As the DeKalb County Registrar, the DeKalb County Health Department has the responsibility of administering the issuance of birth and death records. We issue birth and death records to individuals who were born or deceased in DeKalb County from 1916 to present. In 2016, we issued 957 birth certificates and 751 death certificates.

**HEALTHCARE ENROLLMENT ASSISTANCE PROGRAM (HEAP)**

Access to healthcare is largely dependent on health insurance enrollment. DeKalb County Health Department has been providing assistance for enrollment into healthcare coverage since 2013 with the opening of the first year of the Health Insurance Marketplace and expanded Medicaid programs, as a part of the national Affordable Care Act. Today, there are more health insurance options than ever and each plan has unique eligibility requirements that can be difficult to understand.

Our Certified Application Counselor (CAC) works on a case-by-case basis to formulate options for each client. Sometimes the assistance is a phone call to answer a simple question, but more often we assist the client in completing the application from start to finish. Post-enrollment tasks such as locating a physician and filing appeals are also a part of our work.

In 2016, the Healthcare Enrollment Assistance Program served 569 clients, conducted 245 appointments, completed 104 Marketplace Insurance applications and completed 136 Medicaid enrollments.
EMERGENCY PREPAREDNESS

Planning is the key to surviving a disaster or an emergency. Disaster responses are not created at the time of the disaster nor can responses be decided in isolation. We work on a daily basis with our county, regional, and state partners to be as prepared as possible for the citizens of DeKalb County. In Emergency Preparedness we “plan for the worst, but hope it never happens”.

In March of 2016 DeKalb County Health Department (DCHD) coordinated and hosted a Center for Disease Control (CDC) sponsored Crisis Emergency Risk Communication (CERC) training. There were twenty-six registrants for the CERC training including ten DCHD employees and sixteen community and regional partners.

One of the key preparedness responsibilities of the Health Department is that of medication or vaccination distribution to our over 100,000 residents in the event of an outbreak or release of an agent. This response was tested through a Statewide Full Scale Exercise on June 13-15 in which DCHD dispensed “medication” to 413 families representing 848 individuals within a two-hour timeframe. County partners including DeKalb County Emergency Service Disaster Agency (ESDA), DeKalb County Sheriff’s Department, DeKalb Fire Department, DeKalb Police Department, Northern Illinois University Police Department, Northwest Medicine KishHealth System, Kishwaukee College Nursing Program and Northern Illinois University School of Nursing, and Boy Scout Troop #2810 participated in the drill to test components of their own emergency plan.

In an effort to promote Zika Virus awareness, a Mosquito Bite Prevention Campaign was initiated in the months of July and August. Activities included information shared through radio, paid advertisement in local papers and websites, bus shelter ads, and bus poster ads. Over 2,000 cans of mosquito repellent and prevention information were distributed to DeKalb County food pantries.

Preparation activities for all DCHD employees included coordination with DeKalb Police and DeKalb County Sheriff’s Department to provide Intruder Safety and Awareness training.

SOLID WASTE

The Solid Waste Program is committed to diverting waste away from landfills with the help of county residents and businesses. Residents landfilled 5 pounds per person per day in 2016. This was a slight increase in waste generated compared to 2015. Our goal is to reduce this figure by 50% by the year 2034. We are continually educating the public, businesses and municipalities on best practices in disposal and recycling.

We collaborated with various organizations to conduct collections to divert material from the landfill. Over 136 tons of e-waste including 1,000 tube televisions, 5 tons of household hazardous waste, 500 pounds of shoes and clothing donations, and over 1,000 pounds of holiday lights were collected.

We contracted with University of Illinois Extension Office to provide recycling education to over 4,000 DeKalb County students and held the first annual Green Living Festival. We are partnering with Waste Management and the City of DeKalb to plan for a residential food waste collection pilot program. This will allow us to explore the feasibility of expanding organic collection in the county.

At the Green Living Festival, clients took a tour of DeKalb County Community Gardens. They made a fresh salad from vegetables picked that day, learned how to save energy, to reduce waste and how to save money while being green.
COMMUNICABLE DISEASE

The Communicable Disease (CD) Program investigates reportable diseases in DeKalb County residents by working collaboratively with healthcare providers, schools, childcare staff and the Illinois Department of Public Health (IDPH). Collection and analysis of surveillance data is utilized to identify the cause of disease, prevent the spread of illness and promote the health of residents infected and affected by the disease.

In 2016, examples of this evidence-based practice include the completion of the investigation and response to an outbreak of Mumps at Northern Illinois University. A total of 72 cases were investigated with 37 cases confirmed. Surveillance and control measures contained the illness to a specific population, preventing a campus-wide outbreak.

There was a confirmed case of Measles identified in an international traveler visiting DeKalb County. Exposure to the disease occurred in a large venue, and in local restaurants and businesses. With guidance from the IDPH CD Division, and collaboration with three other counties where exposures occurred, effective disease control measures and surveillance were implemented. There were no cases in DeKalb County resulting from this exposure.

Seven confirmed cases of Hepatitis A were reported in November with an additional 4 cases reported in December. Of these 11 cases, 2 reside in neighboring counties, resulting in collaborative case investigation. Prevention and control measures were implemented to contain the outbreak.

The CD staff conducted 852 case investigations, including 2 individual cases of Legionnaires’ disease, 5 potential Rabies exposures, 7 residents tested for the Zika virus, of which one non-pregnant female traveler tested positive. They also coordinated responses to 4 outbreaks including viral acute gastroenteritis at two assisted living facilities.

The CD Program continues to provide treatment for partners of those diagnosed with a sexually transmitted infection (STI) and HIV Medical Case Management.

Tuberculosis (TB) testing, treatment for TB infection and active disease, and education is provided. As a result of these measures, DeKalb County remains a low-risk county for TB.

HEALTH PROTECTION

The focus of the Health Protection Division is the environment in which residents live and work every day. Staff are out in the community reducing transmission of disease through food, water, sewage and animal conditions. The most common way that the public is aware of us is through restaurant inspections and food permits. We issue over 500 permits to restaurants and grocery stores and we inspect each of them one to three times each year. This ensures that the food you eat is being handled and cooked properly. We also protect the public’s health through similar permit and inspection services for well water, sewage disposal, and tanning and body art facilities. Staff also provide education to residents on mold, pest control, and radon. We educate the residents on these issues so they can make informed decisions for their health.
Programs

CHILDHOOD IMMUNIZATIONS

The DeKalb County Health Department (DCHD) Childhood Immunizations Program provides vaccines for preventable diseases to children, including flu vaccines. DCHD is one of the only Vaccines for Children (VFC) providers in DeKalb County and provides free or low-cost vaccines to eligible children up to 19 years of age to children who otherwise would not have access to immunizations. Every $1 spent on childhood vaccines saves over $16 in future healthcare costs.

In October of 2016, we were informed by IDPH that we could no longer use the VFC stock of immunizations for the subset of children who are insured under the Childhood Health Insurance Program (CHIP). Unlike many surrounding local health departments, DCHD had established a strong private insurance immunization program over the last few years and were able to make the transition. Healthcare providers reached out to us in search of someone who could serve these patients.

Our private insurance and self-pay program has grown over the past two years as parents recognize the convenience and expertise that the Health Department provides. This program has increased from 78 private insurance or self-pay clients in 2014 to 269 clients in 2016; likewise, 73 private insurance or self-pay immunization doses were administered in 2014 and 489 immunization doses in 2016.

The Childhood Immunization Program works diligently with community partners to eliminate barriers in obtaining school required immunizations, reducing the number of DeKalb County students being excluded from school. We practice the concept of “no missed opportunity” and while immunization appointments are recommended, walk-in’s are also accepted. DCHD also practices an Immunization RN Case Management model which allows caregivers the opportunity to have a private discussion about their child’s immunization needs.

The Health Department conducts an immunization clinic in Sandwich, Illinois once per month. During flu season, we also offer adult and children’s flu shots at that clinic.

ADULT IMMUNIZATIONS

“You are never too old to immunize!” The DeKalb County Health Department (DCHD) Adult and Travel Immunizations Program provides vaccines for preventable diseases to adults.

DCHD has administered over 2,550 adult vaccines in 2016. DCHD also provided flu vaccines to employees at Northern Illinois University at two flu clinics held on campus. DCHD administers approximately 1,000 flu shots each year.

The Travel Immunizations Program provides international traveler services during a comprehensive nurse consultation. In addition to recommended vaccinations, the consultation also includes travel advisories and security updates, hotel and embassy contact information, general prevention and personal safety information, and country profiles and maps specific to the destination.

Did you know that every $1 invested in childhood immunizations saves over $16 in future healthcare costs?
The picture of a community’s overall health status is greatly reflected in health outcomes for mothers and their babies. As a Health Department, strengthening local maternal and child health is central to our operations. Through these efforts, the division helps protect the most vulnerable of DeKalb County’s population. To do this, we have several interrelated programs available.

The Women, Infants, & Children (WIC) Program is a supplemental nutrition program that helps meet the nutritional needs of income-eligible women who are pregnant or breastfeeding, and infants and children under 5 years of age. The program performs health and nutritional assessments and education, provides food vouchers to participating local stores, and provides breastfeeding support. The DeKalb County WIC Program is proud to have seven Certified Lactation Counselors to provide support to newly breastfeeding mothers.

Understanding the needs of our clients, the program supports walk-in service. In 2016, we served between 1,500 and 1,800 individuals per month. DCHD also strives to reach out to those who are working but may be eligible for services and food vouchers. A family of four can still qualify even if they earn up to $44,955 per year.

Through the Family Case Management (FCM) Program, case managers provide support, assistance, and referrals throughout a mother’s pregnancy to aid in a healthy birth. When we prevent even one preterm birth through our Maternal and Child Health Programs, we save over $50,000 in future medical expenses. We offer management for high-risk children and infants, and children in foster care. In 2016, our FCM Program served an average caseload of over 650 families.

The DeKalb County Health Department also conducts lead screening and follow-up for at-risk children including healthy home environment education. In 2016, 24 children were screened, with an average of 5 children per month being monitored.

The Family Planning Program assists individuals to achieve desired birth spacing and family size and contributes to improved health outcomes for infants, children, women, and families. Confidential, non-judgmental services are provided to assist with sexual health wellness of males and females of reproductive age.

Services for Family Planning clients include pregnancy testing, birth control, reproductive life planning, exams, counseling and education. Services also include testing and treatment of sexually transmitted infections (STIs) including HIV testing. In 2016, over 2,000 visits were provided.

Cristina Cruz, WIC Program Nutritionist and Case Manager, was presented with an IDPH Public Health Champion Award. The award is consistent with the goal of Hispanic Heritage Month, which is to honor individuals for improving the health of the public and to celebrate the achievements of Hispanics throughout Illinois. She was one of eight that received this award in Illinois.

Did you know that preventing just one preterm birth can save up to $50,000 in future medical expenses?
Public health continuously evaluates how to better educate the community on promotion of healthy lifestyles. DeKalb County Health Department (DCHD) focuses on DeKalb County schools to promote that healthy lifestyle early in the child’s life. Health Promotion staff continue to participate in Coordinated Approach to Child Health (CATCH) throughout DeKalb County.

DCHD has promoted these healthy choices through ‘Reality Illinois’, a policy program that encourages middle school students to advocate their own smoking prevention strategies. Through ‘Reality’, students learn how they can influence public health. Within the first year of ‘Reality’, our local middle schoolers were involved in advancing legislation for smoke-free parks in DeKalb. The students also participated in the Kick Butts Day activities. Health Promotion staff members were featured on a local radio station to talk about their efforts with Reality Illinois in support of Kick Butts Day, 2016.

DCHD is also involved with the Smoke Free Illinois Act (SFIA). SFIA materials were approved by the Illinois Department of Public Health (IDPH). In conjunction with SFIA enforcement efforts, surveys were sent via email regarding smoke/tobacco free policies. Division staff conducted 42 random Smoke Free Illinois Act (SFIA) compliance checks in December. All 42 businesses are in compliance.

DCHD coordinated the County Smoke and Tobacco Free Worksite Committee in 2016. Outreach efforts continue with religious affiliations to establish relationships to promote the Illinois Tobacco Quitline. Division staff met with Northwestern Medicine KishHealth System Wellness staff to collaborate on various tobacco related projects that will be launched in January and to discuss school-based programming efforts to minimize duplication.

Within the first year of ‘Reality’, our local middle schoolers were involved in advancing legislation for smoke-free parks in DeKalb.
ON-SITE DENTAL

An important development in 2016 was the pilot program of a collaboration between the DeKalb County Health Department and ONSITE Dental®, to decrease the barriers of affordable dental care. Dr. Jason Grinter has been providing dental exams and cleanings in the DeKalb schools since 2012, however, any further work such as fillings or crowns required the child’s family to drive to his office in Rockford. By collaborating with the DCHD, Dr. Grinter and his team can now do these follow up dental appointments at the Health Department. Appointments are available once each month for ages 0-21. Medicaid and most insurances are accepted.

HEALTHY START TO SCHOOL (HSS)

DeKalb County Health Department coordinates and hosts a Healthy Start to School (HSS) event that focuses on the health aspects of school readiness including administering immunizations and providing school and sports physicals. The second annual event was held August 4th with a second date added this year of August 11th. We completed 76 physical exams and 52 clients received immunizations. Additionally, the Solid Waste Program partnered with several DeKalb County organizations to present the Green Living Festival and distribute shoes from our shoe share.

CHILDREN’S ADVOCACY CENTER (CAC)

In coordination with the DeKalb County Health Department, DeKalb County Community Foundation, and KishHealth System, a part of Northwestern Medicine, the DeKalb County Family Service Agencies Children’s Advocacy Center (CAC) began to offer the services of a Medical Evaluation Response Initiative Team (MERIT) in DeKalb County. MERIT has the ability to conduct specialized medical evaluations for children who have been victims to suspected sexual or physical abuse. Through coordination by the CAC, these exams will now be conducted at the DeKalb County Health Department by a pediatrician who is board certified in child abuse examinations.

NIU FOOD INSPECTIONS

The DeKalb County Health Department forged a new partnership with Northern Illinois University (NIU) in 2016 to conduct food safety inspections on campus. This agreement allows potential risks to be identified and corrected before a problem could occur. Prior to this collaboration, inspections were conducted internally by managers in each food area. The standardized inspections on campus by Health Protection staff will lower the risk to the NIU community and allow the Health Department to respond to concerns.

**Division Statistics**

**ADMINISTRATION DIVISION**

Jane E. Lux, MPH, Public Health Administrator  
Lisa Gonzalez, MPH, Public Health Administrator  
Brenda Courtney, Director of Administrative Services

Provided administrative leadership for the department through management initiatives.

Employed and supervised qualified staff directing the overall operation of the department.

Supervised the performance of program standards to assure health department certification by the Illinois Department of Public Health.

Managed funding for programs through the acquisition of fees, grants, contracts and county financial support. Conducted the department’s fiscal management and financial accountability.

Reviewed, evaluated, and updated the department’s goals and objectives.

Represented the community’s overall interest in matters relating to public health.

**Vital Records**

Through registration, the official recording of births and deaths occurring in DeKalb County.

**HEALTH PROTECTION DIVISION**

Greg Maurice, BS, LEHP, Director

Inspections, investigations, surveillance, and education preventing the transmission of disease through food, water, sewage, animal and nuisance conditions. Waste management efforts directed at reducing the amount of waste that is landfilled.

**Food Service Sanitation**

Food establishments licensed  547  
Food establishment inspections  884  
Temporary establishments licensed  25  
Temporary food establishment inspections  289  
Food establishment complaint investigations  15

**Potable Water and Sewage Disposal**

Well permits issued  23  
New well inspections  39  
Water samples obtained and tested  146  
Sewage disposal permits  57  
Sewage disposal inspections  75  
Sewage disposal complaint investigations  5  
Private sewage contractor licenses issued  8  
Real estate sewage disposal inspections  6  
Real estate well inspections  29  
Real estate well/sewage disposal inspections  54

**Tanning and Body Art Facilities**

Tanning facility inspections  10  
Body art facility inspections  7

**Solid Waste Program**

Provided information and consultation to individuals, businesses, municipalities, school districts and media regarding recycling and waste reduction.

**Animal Control**

Dogs registered for one year  5,625  
Dogs registered for three years  3,000  
Total dogs with current vaccine  13,426  
Animals impounded  205  
Other animals handled  126  
Specimens examined for rabies  77  
Specimens positive for rabies  1  
Animal bites reported and investigated  158  
Livestock kills investigated  1

**HEALTH PROMOTION & EMERGENCY PREPAREDNESS DIVISION**

Cindy Graves, RN, BS, MSHA, Director  
Melissa Edwards, MPH, Coordinator

**Health Promotion**

Programs to improve population health through reduction of chronic disease, promotion of healthy lifestyles and reduction of health disparities.

**Emergency Preparedness**

Improved county emergency response capacity through planning and exercise activities including:

- Use of capabilities to guide and enhance preparedness planning in the county
- Incorporating best practices and testing of emergency medication dispensing plan
- Coordination of health department and countywide emergency planning team meetings
- Collaboration with local, regional, and state planning efforts

**Healthcare Enrollment Assistance Program**

Provides assistance with enrollment in the Health Insurance Marketplace and expanded Medicaid implemented as part of the national Affordable Care Act.

- Appointments  245  
- Marketplace Applications Completed  104  
- Medicaid Enrollments  136  
- Clients Served  569

**Vision and Hearing Screening Program**

Screening of children to identify and refer those who are in need of intervention.

- Number of Vision screenings  3,016  
- Number of Hearing screenings  4,008
