

Covid-19 Booster Vaccination Attestation for Immunocompromised Patients

I _____ attest that I have been diagnosed with a condition that is considered immunocompromising or my physician has recommended that I receive a booster dose of the mRNA vaccination (Pfizer or Moderna) due to a current condition that meets the CDC recommendation for COVID-19 booster vaccination.

The booster dose should be administered no sooner than 28 days after the second dose of COVID-19 vaccine.

Currently, CDC is recommending that moderately to severely immunocompromised people receive an additional dose. This includes people who have:

- Been receiving active cancer treatment for tumors or cancers of the blood
- Received an organ transplant and are taking medicine to suppress the immune system
- Received a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
- Moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids or other drugs that may suppress your immune response

My healthcare provider is recommending that I or my dependent receive a third booster dose of mRNA Covid-19 vaccine to improve protection from COVID-19 due to a compromised immune system.
